

MR25H00-EVAL MRAM Evaluation Board

The MR25H00-EVAL MRAM evaluation board from Everspin is an Arduino-derived MRAM Shield that will interface with any Arduino-derived microcontroller host board with standardized UNO pinout.

The Evaluation Board

The evaluation board is populated with a 4Mbit Everspin MR25H40 SPI MRAM for evaluation of any of the Everspin Product Families listed below.

Everspin Product Family	Density	Temperature Grades
MR25H256	256 Kb / 40MHz	Industrial / AEC-Q100 Grade 1
MR25H10	1 Mb / 40MHz	Industrial / AEC-Q100 Grade 1
MR20H40	4Mb / 50MHz	Industrial
MR25H40	4 Mb / 40MHz	Industrial / AEC-Q100 Grade 1

Host Board Support

The MR25H00-EVAL Evaluation board employs a pin out that is compatible with the Arduino form factor UNO pinout. The board utilizes the SPI interface on UNO pins D10, D11, D12, and D13. The HOLD and WP pins are connected to digital pins D8 and D9. See **Appendix A – MR25H00-EVAL Schematic and Layout** for more detail.

By using this common MCU evaluation board pinout, the MR25H00-EVAL board is compatible with a large number of MCU evaluation boards. For example, the following four MCU series listed below with Arduino-derived host boards will work for evaluation using the SPI MRAM Evaluation board.

Host Board Supplier	MCU	Host Board
ST Micro	STM32F411RET6 Series	NUCLEO-F411RE
Freescale	Kinetis MCU Series	Kinetis Freedom
NXP	LCP Series MCU	LPCXpresso
Renesas	ARM Cortex [™] -A9 processor Series	GR-PEACH: RZ/A1H

We use the NUCLEO-F411RE host board as the example for setup in this Guide.

SETUP: MR10Q010 - EVAL MRAM EVALUATION BOARD

Besides the MCU host board and the Everspin MR25H00-EVAL Evaluation board, you will need:

- Computer with Internet access and USB port.
- A USB cable, with standard A to mini B connectors.
- Everspin example code from www.mbed.org.

Step 1: Download the USB Driver for your MCU Host Board

Host Board	USB Driver
NUCLEO-F411RE	Host Board Description and Drivers
Kinetis Freedom	Host Board Description and Drivers
LPCXpresso	Host Board Description and Drivers
GR-PEACH: RZ/A1H	Host Board Description and Drivers
Other	Host Board home page

Step 2: Plug in the SPI Evaluation board and connect it to your computer via the USB port.

First, plug the MR25H00-EVAL board into your MCU host board, then connect the host board to your PC using the USB cable. The MCU host board will enumerate as a composite USB device that includes a built in debugger, storage device and a virtual com port.

A new drive will be created on your computer with a drive name as assigned by the host board. We are using the NUCLEO-411RE as an example for this Setup description.

🖉 🔄 – 🛃 🕨 Comp	uter 🕨			▼ 4 9 Sei	arch Computer

🮇 Libraries	WDVD RW Drive (D:)	CD Drive Removable Disk	528 KB	512 KB		

Step 3: Log in to ARM mbed and create a Workspace on your computer.

- 1. Log in to <u>developer.mbed.org</u>. (If you do not already have an **mbed** account, you will need to create one.)
- 2. After logging in, click on the **Compiler** button on the upper right section of the screen.

3. The **mbed** compiler will bring up the **Workspace Management** screen.

	Your Program Workspace is empty. You can <u>import a program</u> or <u>create a new one</u> .	
Ready.		INS

Step 4: Load the platform for the host board you are using

1. The button on the upper right of the Workspace Management screen will read **No device selected** or, if you have previously loaded a platform, the name of the host board for that platform will appear, as in the **NUCLEO-411RE** case shown.

2. In either case, click on the button to open the available compiler platforms screen. Select the host board platform you wish to load or, if it is not present, then select **Add**.

3. Adding a platform to your Workspace. If you selected Add, mbed will display a scrolling list of available platforms. Find the MCU host board you are using and click on the image.

4. mbed will open a new window as an information page for that host platform, such as the NUCLEO-411RE example here. To add this platform to your workspace, click on the Add to your mbed Compiler button.

5. The platform will be added to your registered platforms list.

Step 5: Import the Everspin Serial MRAM demonstration program. The example code is available on www.mbed.org.

1. In your Workspace, click **Import**.

2. The **Import a program** dialog box will open. Click on the **Programs** tab.

mbed	Select prog	a program 1 gram from the lis to import from U	t. You can als	-	m in your worksp	ace.	Import!

				ria to search for he "Search" butto	on mbed.org. on to list all prog	rams.	

- 3. Search for the "MR25H00-EVAL" program, select it and click Import!
- 4. The demonstration program will now appear in the Program Workspace.

Setup (Concluded)

Step 6: Compile the binary file and and load to your MCU evaluation board.

- 1. Highlight the **MRAM_MR25H00-EVAL** program folder in your **Program Workspace** tree in the lefthand column.
- 2. Click **Compile** in the top menu.

🗉 💿 mbed	D	main.cpp	4.9 kB	C/C++ Source File	moments ago
	٢	mbed		Library Build	moments ago

- 3. The program will be compiled and the binary (.bin) file created will automatically be downloaded to your computer's designated download location.
- 4. Drag and drop the binary file into the host board drive that you created in **Step 2.** When the file is dropped into the folder, your MCU host board will begin to program. The LED on you host board may blink a few times to confirm that the program is loading. When the program is fully loaded, the binary file will automatically delete from your MCU host board drive.

Run the Demonstration

Step 1: *Use a terminal emulator to run the demonstration.*

- 1. Use your favorite terminal emulator. For this example, we used the Tera Term emulator from SourceForge at <u>http://en.osdn.jp/projects/ttssh2/releases/.</u>
- 2. After installing, open Tera Term and select the serial port associated with your host board to create a new connection.
- 3. Configure the serial port under **Setup->Serial port with: 115200 baud, 8-N-1**.

◯ TCP/ <u>I</u> P	Hos <u>t</u> :	myhost.exar	nple.com		-
	Service:	✓ History ○ Telnet	ТСР ро	rt#: 22	
		@ <u>\$</u> \$H	SSH version:	SSH2	Ŧ
		© Other	Proto <u>c</u> ol:	UNSPEC	
Serial	Po <u>r</u> t:	COM3: STMi	croelectronics S	TLink Virt	. •

- 4. Press any key on the keyboard or the **Reset** button on your MCU host board to run the demonstration and view the demonstration output on the terminal emulator.
- 5. Every time the demo is run, the test count is incremented to demonstrate memory non-volatility and the performance is calculated for reading/writing the full array.

Run the Demonstration (Concluded)

The time to access the memory is extremely fast and does not require any wait states like flash. Read performance will be observed to be slightly slower than writes due to the error checking performed by the program. In reality, Write / Read performance for MRAM is symmetrical.

05 05 05 05 05 05 05 05 05 05 05 05 05 0	
	

NOTE: In order to evaluate smaller memory densities, simply change the value of *MRAM_SIZE* at the top of main.cpp file and recompile:

Desired Density	MRAM_SIZE value
256Kbit	0x2000
1Mbit	0x8000
4Mbit	0x20000

Export the Demonstration Code to Other Toolchains

You may export the demonstration code to work with other ARM-based toolchains.

- 1. Once you have the Everspin MR25H00-EVAL example program loaded into ARM mbed you may export it for development in production ARM tool chains.
- 2. Right click on the MRAM_MR25H00-EVAL program in the left column of the workspace and select **Export Program**.
- 3. Using **Export Target** and **Export Toolchain** in the dialog box, pick the target MCU host board and Toolchain for export and click on the **Export** button. The Everspin MR25H00-EVAL example code will be exported to the tool chain you selected.
